

COUNTY STATE-AID HIGHWAY (CSAH) 20 BRIDGE REPLACEMENT

Partners:

- Chisago County Public Works Department
- City of Lindström
- Chisago Lakes Lake Improvement District

One of the goals of the Chisago Lakes Lake Improvement District is to restore, improve and maintain navigation channels between the lakes.

In 2018, the Chisago County Public Works Department replaced the County Road 20 bridge between North Lindstrom and North Center Lakes. The old bridge height was 1/2 foot above ordinary high water. Under high water conditions, navigation under the bridge was difficult or impossible. The new bridge is 6.5 feet above ordinary high water.

The new bridge:

- Allows for the safe passage of most boats in all water level conditions;
- Allows for more and better near-term options for successful development of recreational boating uses;
- Keeps more and better future options open for the 75-100 year expected life of the bridge; and
- Creates a safe way for snowmobiles and other off-road vehicles to pass under the bridge in the winter.
