

EURASIAN WATER MILFOIL TREATMENT

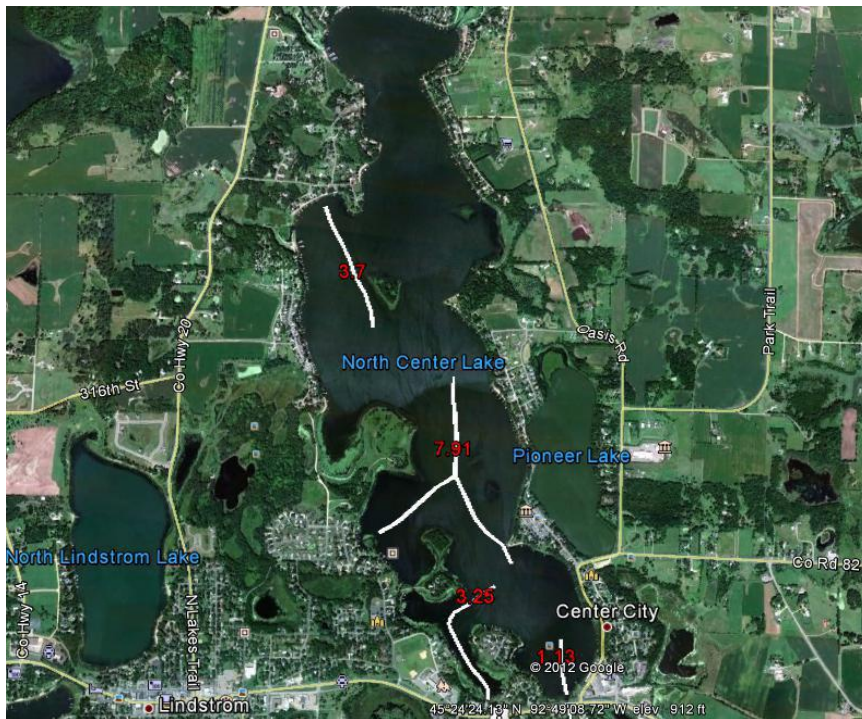

IMPROVE NAVIGATION

Eurasian Water Milfoil is a serious problem in the Chisago Chain of Lakes Watershed. Milfoil grows in dense mats and can make navigation nearly impossible. Milfoil spreads primarily via boats carrying it from one lake to the next.

Milfoil has been in Green Lake for a number of years and is currently spreading through the Chain of Lakes.

The Lake Improvement District is partnering with lake associations and the Minnesota DNR to control Eurasian Water Milfoil for the purpose of improving navigation.

Partners:

Chisago Lakes Lake Improvement District
Center Lakes Association
Green Lake Association
Minnesota Department of Natural Resources

Lakes Treated:

Green
Little Green
North Center
South Center
